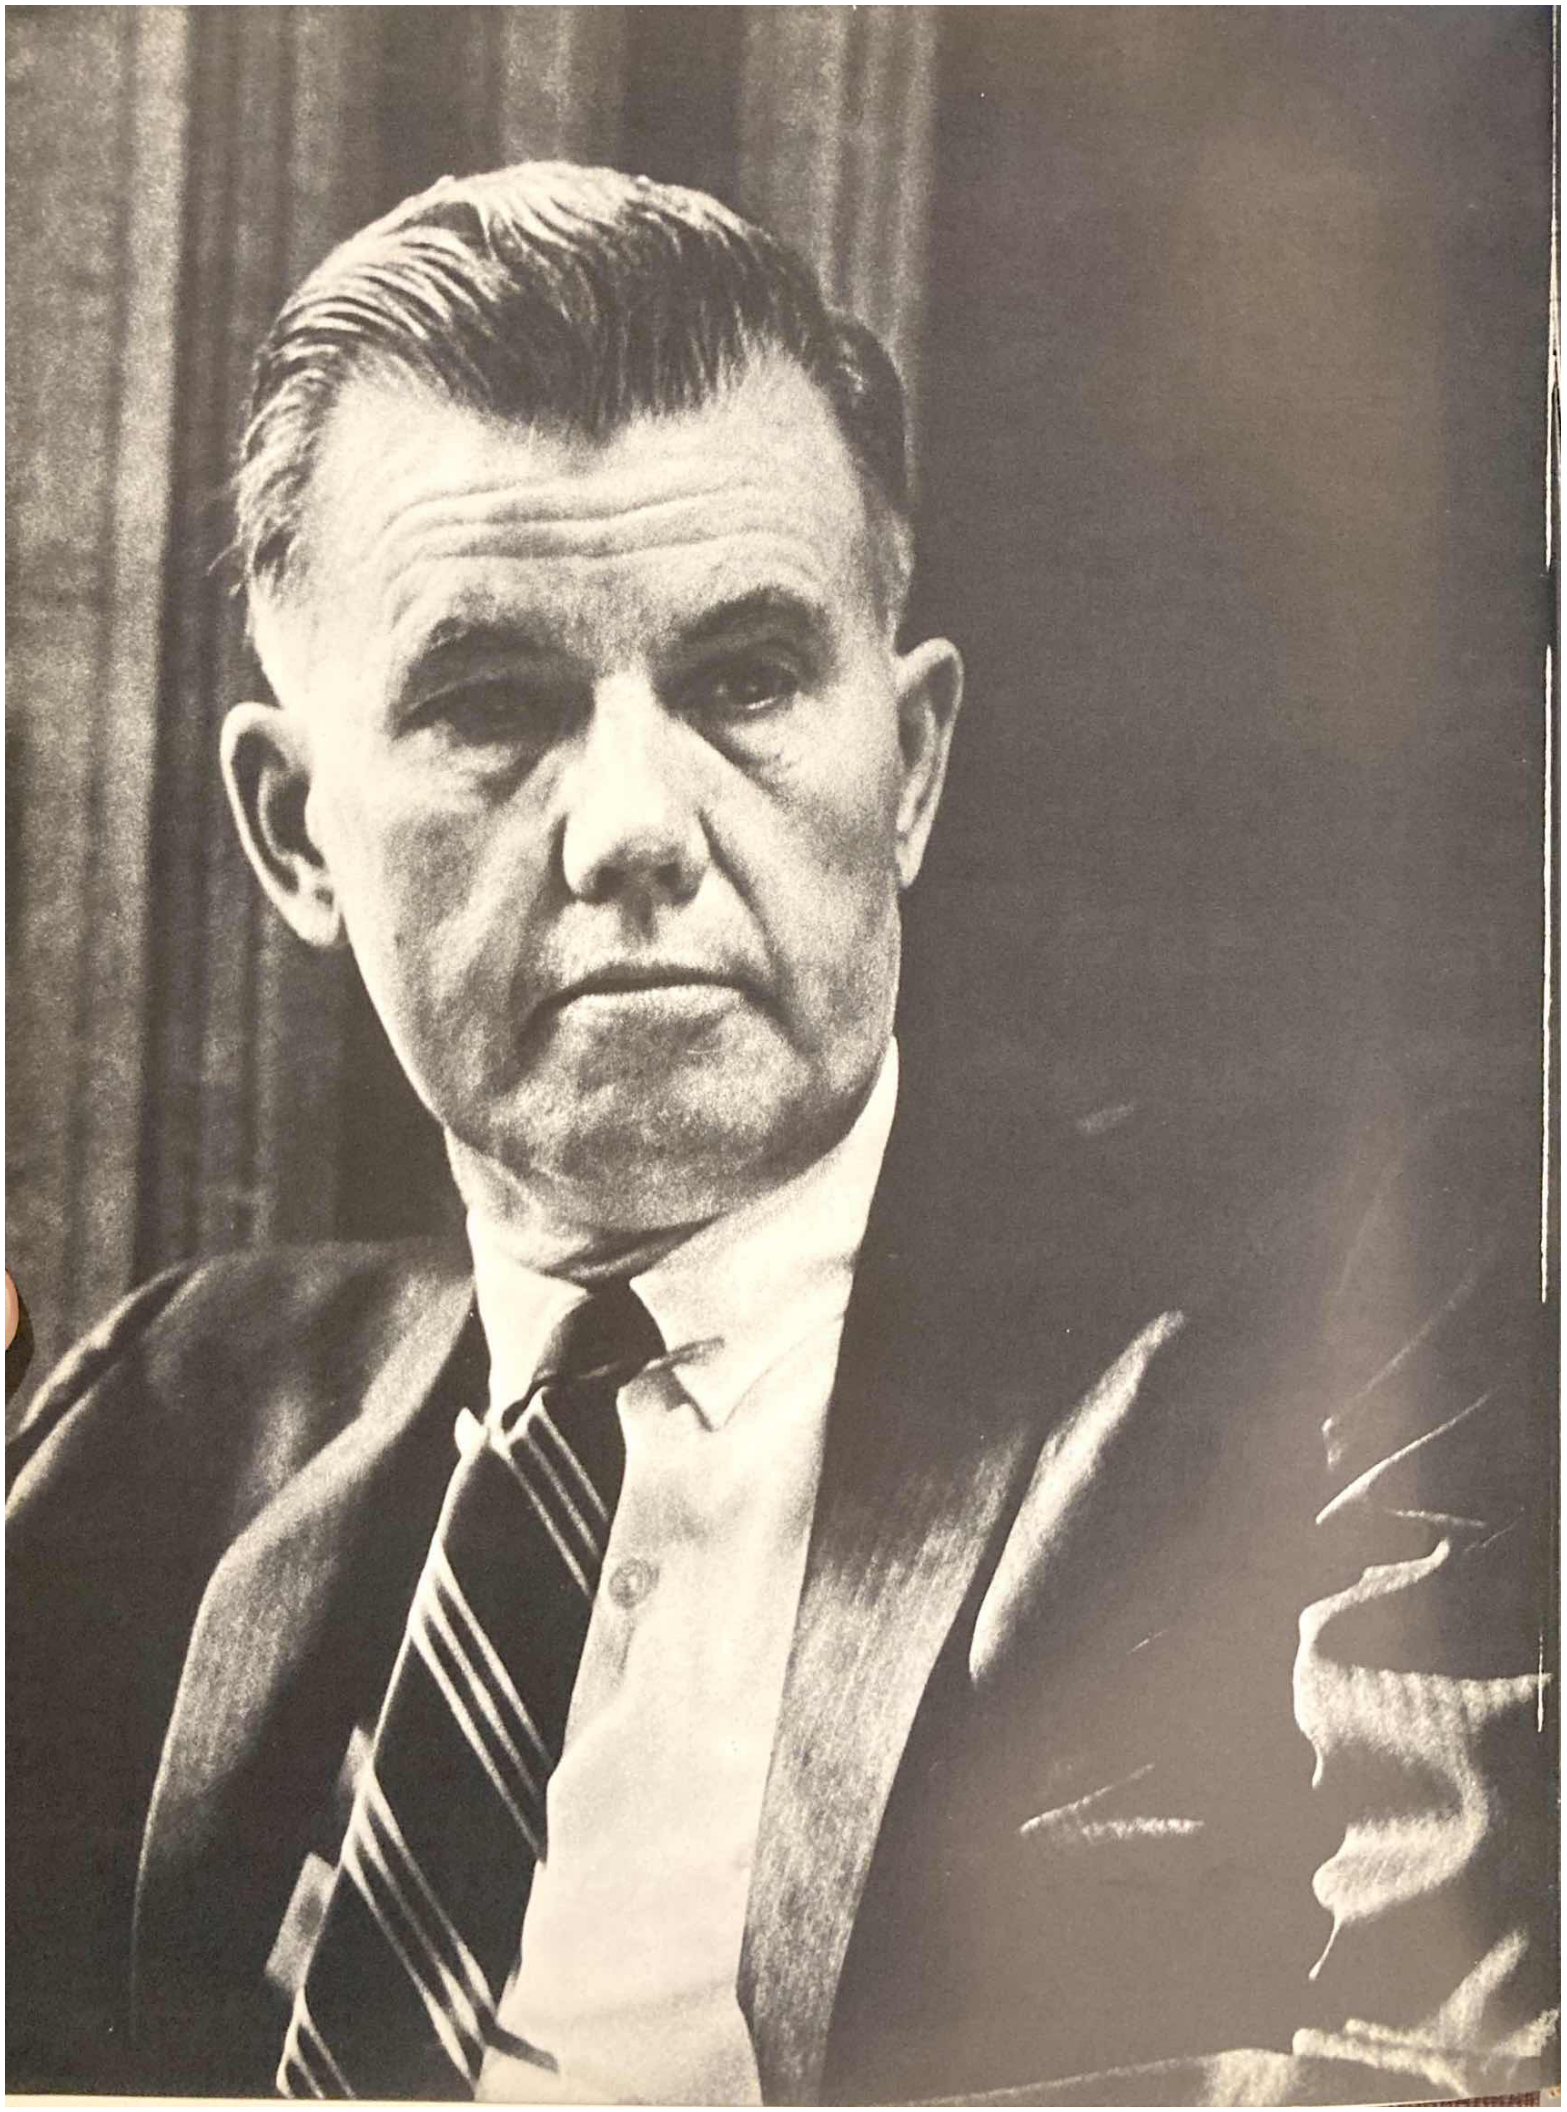
The Cooper Union for the Advancement of Science and Art—New York City



Office of the President

Letter to the Seniors

Recently I had a talk with a graduate of Cooper Union—one of the younger graduates—who in the past few years has enjoyed a rather sensational professional success. In passing I asked him what he remembered best about Cooper. Without speaking, he thought for a few seconds. Then he said, "People."

The Cooper memories that were uppermost in this man's mind were of his fellow students—of people he had liked or, maybe, had disliked; people whose interests were akin to his; people with whom his acquaintance in school developed into permanent friendship. "These people helped me to mature," he said, "and they were fun, too." He didn't remember specific incidents as well as he remembered personalities. He said it was at Cooper Union that his interest was directed into the professional field that he has now made his own, but that sense of direction was largely motivated by the example of a teacher whose professional talent he admired.

I suspect that this is true, or will be, for most of you. Perhaps one of the best gifts that Cooper Union can bestow is acquainting its new students with a gifted student body and faculty whose talents and interests are related to their own. We have tried to match this gift with a sound education that will help you to succeed in your professional career. We wish you a career as creatively successful as that of the graduate I talked with and an outlook as humanely based as his is.

The UTC ad illustrated shows a few items of the largest stock line in the industry today. But the major portion of UTC's production is for units specially made to customer's specifications. These units, transformers, electric wave filters, high Q coils, reactors, magnetic amplifiers, pulse transformers, etc., are highly essential in today's advanced sciences of electronics and avionics. UTC's constant designing and manufacturing deligence, backed by long years of experience, assures the highest degree of quality and reliability.

ENGINEERING—Over 30 years of engineering knowledge and experience go into UTC designs. They are fully laboratory proven before being released for production.

MATERIALS AND LIFE TESTING—The UTC Material and Chemical laboratories fully analyze and evaluate the materials employed in UTC transformers. Finished units, as well as insulation systems, are constantly undergoing life tests to provide guides for design and manufacturing processes which will provide greatest reliability. To provide statistical validity, *over 10,000 life tests are run in a typical year.*

QUALITY CONTROL—The Quality Control Division at UTC coordinates all statistics relating to materials and processes. All incoming materials are subjected to exhaustive testing, with individual lots of materials separately isolated and linked to their test reports so that subsequent variation in the finished production can be tied back to specific material received. Parts made within the UTC plant, such as drawn cans, stamped laminations, etc., are inspected and treated as though they were provided by an outside vendor.

PRODUCT TESTING—Each individual transformer or filter produced by UTC is tested for all of its performance requirements three times during successive stages of manufacture. In addition to this, a substantial sampling of each day's production is put through extensive humidity, vibration, thermal shock, and overload testing to assure product performance and reliability.

THE END RESULT—UTC's level of quality and reliability is the highest in the industry . . . twenty times better than the industry average, based on available information.

COOPER UNION ALUMNI ASSOCIATION

Three thousand members of the Alumni Association extend a warm welcome to the Class of 1967, and an invitation to visit our headquarters in the Hewitt Building and enjoy our attractive, comfortable air-conditioned lounge and other facilities.

We look forward to your participation in our program of activities, which helps the school while it benefits the alumni. This program includes interesting meetings which feature outstanding speakers on topics of current significance . . . an educational program consisting of our highly reputed Professional Engineers review course and seminars . . . a weekly sketch class and the Peter Cooper Gallery for exhibiting the work of our artist members . . . publication of the Alumni News and the special Founder's Day Yearbook Issue . . . class reunions and social gathering of alumni groups . . . the Annual Alumni Day with its class reunions and fun for the whole family at Green Camp in September . . . the Founder's Day Dinner and Dance in February, when we pay tribute to Peter Cooper and honor our distinguished fellow alumni by the presentation of citations and the Gano Dunn and Augustus St. Gaudens medals for professional achievement . . . encouragement of undergraduates by financing extracurricular activities and awarding prizes for academic excellence. And, if you leave the New York City area after graduation, there are chapters of the Alumni Association organized in many cities.

The alumni of a college constitute one of its invaluable, unique resources. Cooper Union's alumni consider it a privilege to serve their own distinguished Alma Mater. Its activities which provide pleasure and stimulation for fellow alumni of both the School of Art and Architecture and the School of Engineering also foster and maintain the Alma Mater spirit among all alumni. The Cooper Union Alumni Association has as its major purpose the perpetuation of the ideals of our common benefactor, Peter Cooper, and the preservation of the legacy he bequeathed for us for future generations of students.

We look forward to the support and participation of our newest alumni, the Class of 1967. It is your association now, and you can add meaningful strength to it. Our effectiveness in helping The Cooper Union (and in benefiting ourselves) increases as our membership grows.

congratulations from
